```

```
## 📊 ARIMA Training RMSE: 0.0699
```

9. Final Model Comparison

```r
# 9. Final Model Comparison

# Ensure no duplicates
results_summary <- results_summary %>% filter(!(Model %in% c("ARIMA", "LSTM")
))

# Add LSTM and ARIMA RMSE
results_summary <- results_summary %>%
  add_row(Model = "ARIMA", RMSE = arima_train_rmse)

# Display sorted results
results_summary <- results_summary %>% arrange(RMSE)
print(results_summary)
```

```
## # A tibble: 6 × 2
##   Model           RMSE
##   <chr>          <dbl>
## 1 Linear        0.0115
## 2 Random Forest 0.0156
## 3 Ridge         0.0399
## 4 SVM           0.0686
## 5 ARIMA         0.0699
## 6 Decision Tree 0.160
```

10. Final Conclusion

```
## 🏁 Best performing model: Linear with RMSE: 0.0119
## 📌 Summary:
## - Linear Regression had the lowest RMSE overall.
## - Random Forest also performed competitively.
## - ARIMA performed well in time series forecasting with RMSE: 0.07 .
## - LSTM underperformed in this run but has potential with tuning and more d
ata.
```
